SUBJECT: **Selection of Brelje & Race Consulting Engineers for Engineering and Design Services for Todd Channel Bank Repair Project**

Sonoma Water owns and maintains the existing Todd Channel located outside the southern city limits of Santa Rosa, California. Sonoma Water has identified issues with the vertical retaining walls near the confluence of the Todd Channel and Wilfred Channel, which combine into the Bellevue-Wilfred Channel.

This work will design a solution to the degraded vertical concrete retaining walls along Todd Channel. The work required to complete this design includes geotechnical analysis of the project site, calculations to properly size structural members and drainage system, technical specifications, design drawings, and construction support.

The services performed under this contract will ensure the long-term integrity of Todd Channel and the flood protection services it provides in this portion of the watershed. The calculations, geotechnical analysis, and drawings provided will ensure that the repair meets industry standards.

Brelje & Race Consulting Engineers (Consultant) was selected from a list of qualified consultants developed from a competitive selection process. Attached is a memo that explains the competitive selection process. [21/22-074]

Consultant was selected for the subject work because of their experience and knowledge of flood protection systems and knowledge of the local area.

Internal bargaining unit staff are not being used for this project/work because: the work requires geotechnical and structural expertise. Currently, Sonoma Water does not have internal staff with the relevant licenses or expertise to conduct the design of this project.

The hiring of Consultant for this agreement causes no conflict of interest and is not based on any financial incentive provided to Sonoma Water or its employees and representatives.
