

SUMMARY REPORT

Agenda Date: 7/19/2022

To: Board of Supervisors of Sonoma County

Department or Agency Name(s): Department of Health Services

Staff Name and Phone Number: Tina Rivera, 707-565-4774; Aileen Rodriguez, 707-565-6598

Vote Requirement: Majority

Supervisory District(s): Countywide

Recommended Action:

Adopt a Gold Resolution acknowledging the importance of breastfeeding awareness and support.

Executive Summary:

The Department of Health Services, through their Maternal, Child and Adolescent Health and Women, Infants and Children programs promotes exclusive breastfeeding (along with the appropriate introduction of solid foods) for one year or longer, as desired by the mother and infant. This is an effective prevention strategy to increase protective factors and reduce the risk of overweight and obesity among women and their children. While Sonoma County's breastfeeding rates have continued to remain above average with strong advocacy and support from the health sector, barriers still exist for the low-income and Spanish speaking populations. Increased access to support for exclusive breastfeeding is necessary to continue to reap the unique health, economic, and societal benefits that breastfeeding provides to babies, mothers, families, and the community.

Discussion:

Overwhelming evidence shows breast milk provides optimal nutrition for infants, and breastfeeding offers the best health outcomes for both infants and mothers. Medical professionals, including the American Academy of Pediatrics and the American College of Obstetricians and Gynecologists, along with the Centers for Disease Control and Prevention and the World Health Organization, recommend that infants receive only breastmilk for the first six months and continue to breastfeed up to at least one year of age with the addition of appropriate foods. As the past Executive Director for UNICEF James Grant said, "Exclusive breastfeeding for the first six months goes a long way toward canceling out the health differences between being born into poverty and being born into affluence."

Breast milk offers many benefits for a child's health. It is the perfect first food for babies' growth and brain development; and it protects babies against diarrhea, constipation, allergies, asthma, cancer, diabetes, ear infections, tooth decay, and Sudden Infant Death Syndrome. Among its other well-documented benefits, breastfeeding reduces risk for overweight and obesity. Experts at the Centers for Disease Control and Prevention estimate breastfeeding could help to reduce national obesity rates by up to 20 percent.

Breastfeeding is considered a "Life Course Indicator" as it is a behavior tied to a critical or sensitive time period that impacts a mother and baby's lifelong health trajectory. Over the course of a life, the risks of not breastfeeding include increased incidence of several common childhood illnesses and chronic conditions such as obesity, asthma, and certain cancers. Not breastfeeding is also associated with an increased risk of disease for mothers, including breast cancer, ovarian cancer, type II diabetes, and cardiovascular disease.

The benefits of breastfeeding are dose related so that the longer a woman breastfeeds, the greater protection

she receives. Women whose total lifetime breastfeeding is 6 to 12 months were 10 percent less likely to develop heart disease.

DHS' Women, Infants and Children won the USDA Loving Support Award of Excellence in 2015, 2020, and 2021 for providing exemplary breastfeeding support.

The Department's Women, Infants and Children program also has taken a lead role in Sonoma County in promoting the importance of breastfeeding to community partners, through leading the Sonoma County Breastfeeding Coalition in its collaborative work to ensure all low-income women and babies have the support they need to exclusively breastfeed as recommended by the American Academy of Pediatrics. Together we are creating a sustainable system of care that supports breastfeeding in vulnerable families from birth through the postpartum period and beyond.

Additionally, the Department's Maternal-Child Home Visiting Programs (Nurse-Family Partnership, Teen Parent Connections and Trauma-Informed Approach in Public Health Nursing) play a significant role in promoting breastfeeding among enrolled clients. With support from public health nurses, social workers, and community health workers, participants in home visiting programs are able to meet and exceed their breastfeeding goals. Over the past year, an average of 60% of participants breastfed their children until at least 6 months of age.

This gold resolution solidifies our commitment to community support and awareness, and issues a call to action to continue efforts to support breastfeeding in Sonoma County.

Prior Board Actions:

Most recently, on July 20, 2021 the Board adopted a resolution acknowledging the importance of breastfeeding awareness and support.

The Board also adopted resolutions acknowledging the importance of breastfeeding awareness and support on July 25, 2006, August 7, 2007; August 5, 2008; August 4, 2009; July 30, 2013; July 28, 2015; September 11, 2019; and August 4, 2020.

FISCAL SUMMARY

Expenditures	FY 21-22 Adopted	FY 22-23 Projected	FY 23-24 Projected
