ROILING PERMIT APPLICATION

General Information

The Board of Supervisors approves all roiling permits under Section VIII of the Water Clarity Ordinance of the County of Sonoma, Ordinance No. 3836R (Chapter 23 of the Sonoma County Code).

A complete application must be submitted to Permit Sonoma a minimum of eight weeks before the start of project.

Work cannot start until after the Sonoma County Board of Supervisors has approved the application for a Roiling Permit.

Ordinance No. 3836R is an initiative measure adopted by the electorate of Sonoma County on June 7, 1988. The Ordinance requires that a roiling permit be issued prior to performing the types of work described on the application form. The permit can only be issued upon a four-fifths vote of the Sonoma County Board of Supervisors and only for a maximum period of 30 days. Permits may be extended for additional 30 day periods upon an additional four-fifths vote of the Board of Supervisors. The Board designated the Permit and Resource Management Department (Permit Sonoma) as the administering agency of this Ordinance.

Permit applications are filed at Permit Sonoma, 2550 Ventura Avenue, Santa Rosa, California 95403, by mail or in person. Roiling permits are subject to CEQA. Applications by other than public agencies must be accompanied by evidence that the proposed work or operations have been submitted for review to the Permit and Resource Management Department pursuant to Article III of Chapter 23A of the Sonoma County Code. Such applications shall not be deemed completed until such environmental review has been completed. Applications by departments of the County of Sonoma must be accompanied by evidence of compliance with Article II of Chapter 23A of the Sonoma County Code. Applications by other public agencies must be accompanied by either a Notice of Determination or a Notice of Exemption filed by such public agency pursuant to the California Environmental Quality Act (CEQA).

Because the ordinance requires each permit to be authorized by a four-fifths vote of the Board of Supervisors, the issuance of a permit requires at least two weeks after compliance with CEQA requirements have been demonstrated (but cannot occur until the Board takes action at a regularly scheduled Board meeting).

The categories of work described on the application form may require an Agreement Regarding Proposed Stream or Lake Alteration with the California Department of Fish and Wildlife pursuant to Section 1601 et seq. of the California Fish and Wildlife Code and waste discharge requirements issued by a Regional Water Quality Control Board pursuant to the Porter-Cologne Water Quality Control Act (commencing at Section 13000 of the California Water Code). The work may also require a permit issued by the United States Army Corps of Engineers pursuant to Section 404 of the Federal Clean Water Act. In addition, the work may be subject to other Federal, State, and local governmental regulations. It is the applicant's responsibility to comply with all applicable laws and regulations.

**RUSSIAN RIVER RECREATION AND PARK DISTRICT
STREAMBED ALTERATION PERMIT
PROJECT DESCRIPTION AND PROJECT CONDITIONS**

HISTORY: In excess of the past fifty years the summer flash boards located downstream from Johnson's Beach and at Vacation Beach summer beach crossing have been installed by the Russian River Recreation and Park District. Fish ladders are installed at both locations to facilitate fish passage. Installation has occurred after May 15th with removal by October 15th of each year.

PERIOD OF OPERATION: A one year permit is requested with the work period between 5/15/2022 and 10/15/2022.

PROJECT OUTLINE AND WORK METHODS: In May of each year, after winter flood waters have subsided, two flash board dams are installed. One just downstream from Johnson's Beach Resort, and the other, several miles downstream at the Vacation Beach Summer Crossing. The boards are placed into existing channel structures after debris from the channels and bottom sills are removed. Installation is done by hand and crane. Heavy equipment is not used in the river channel or flowing waters. A winch cable from a dry land vehicle may be used to pull debris away from the channel uprights. All removed debris is moved off site to a disposal area. Fish ladders are installed to facilitate fish passage.
