

not be located at the periphery of the property and shall not spill over onto adjacent properties or into the night sky.

7. All exterior fixtures shall be limited to lamps (light bulbs) not exceeding 100 watts.
8. A Water Conservation Plan shall be submitted for all buildings and landscaping prior to building permit issuance, subject to PRMD review and approval. The Water Conservation Plan shall include all reasonably feasible measures to reduce water demand to the maximum extent feasible and enhance water resource recovery to maintain sustainable water supplies. Measures that must be evaluated include: installation of low-flow fixtures, best available conservation technologies for all water uses, rainwater and stormwater collection systems and graywater reuse. Landscaping plans must comply with the County Water Efficient Landscape Ordinance. Prior to Building Permit Issuance a Landscape Permit application shall be submitted for all new and rehabilitated landscapes, as required by the Water Efficient Landscape Regulations (Chapter 7D3 of the Sonoma County Building Code). Verification from a qualified irrigation specialist that landscaping plan complies with the County Ordinance shall be provided prior to building permit issuance. The measures in the plan shall be implemented by the applicant and verified by PRMD staff prior to Certificate of Occupancy or operation of the use.
9. Low-flow showerheads and faucet aerators shall be installed in all project dwelling units (Low water use toilets are currently required by State Law).
10. All building and/or grading permits shall have the following note printed on plan sheets:

"In the event that archaeological resources such as pottery, arrowheads, midden or culturally modified soil deposits are discovered at any time during grading, scraping or excavation within the property, all work shall be halted in the vicinity of the find and County PRMD Project Review staff shall be notified and a qualified archaeologist shall be contacted immediately to make an evaluation of the find and report to PRMD. PRMD staff may consult and/or notify the appropriate tribal representative from tribes known to PRMD to have interests in the area. Artifacts associated with prehistoric sites include humanly modified stone, shell, bone or other cultural materials such as charcoal, ash and burned rock indicative of food procurement or processing activities. Prehistoric domestic resources include hearths, firepits, or house floor depressions whereas typical mortuary resources are represented by human skeletal remains. Historic artifacts potentially include all by-products of human land use greater than 50 years of age including trash pits older than fifty years of age. When contacted, a member of PRMD Project Review staff and the archaeologist shall visit the site to determine the extent of the resources and to develop and coordinate proper protection/mitigation measures required for the discovery. PRMD may refer the mitigation/protection plan to designated tribal representatives for review and comment. No work shall commence until a protection/mitigation plan is reviewed and approved by PRMD - Project Review staff. Mitigations may include avoidance, removal, preservation and/or recordation in accordance

with California law. Archeological evaluation and mitigation shall be at the applicant's sole expense.

"If human remains are encountered, all work must stop in the immediate vicinity of the discovered remains and PRMD staff, County Coroner and a qualified archaeologist must be notified immediately so that an evaluation can be performed. If the remains are deemed to be Native American, the Native American Heritage Commission must be contacted by the Coroner so that a "Most Likely Descendant" can be designated and the appropriate provisions of the California Government Code and California Public Resources Code will be followed."

Mitigation Monitoring: No permits for any construction activities shall be issued until the above note appears on the construction plans.

11. If construction work, including vegetation removal, is to be initiated between February 1 and August 31, a wildlife biologist should conduct a survey of the site within 14 days of the start of work to determine the potential presence of active nests of migratory birds, including Bryant's savannah sparrow. If not active nests are found during the survey, construction may begin and continue until completed and not impacts to migratory birds will result. If any active nests are found, the wildlife biologist will determine the appropriate action needed for protection of the species that will result in no impacts.
12. Best management practices (BMPs) typically implemented for construction sites should be implemented in order to control sediment runoff. BMPs can include stray wattles, hay bales, silt fences, vegetated buffer strips, and other elements. In particular, the drain in the grassland area should be protected with hay bales or other appropriate elements.
13. This permit shall be subject to revocation or modification by the Permit and Resource Management Department if: (a) the department finds that there has been non-compliance with any of the conditions or (b) the department finds that the use for which this permit is here by granted constitutes a nuisance. Any such revocation shall be preceded by a public hearing noticed and heard pursuant to Section 26-335 and 26C-335.2 of the Coastal Zoning Ordinance.

In any case where a Coastal Permit has not been used within two (2) years after the date of granting thereof, or for such additional period as may be specified in the permit, such permit shall become automatically void and of no further effect provided, however, that upon written request by the applicant prior to the expiration of the two year period the permit approval may be extended for not more than one (1) year by the authority which granted the original permit pursuant to Section 26C-348 of the Coastal Zoning Ordinance.
